ReSpecT[®] compressors

Remanufactured OEM compressors

Why OEM?

Remanufactured to original equipment specifications (OEM), Trane remanufactured compressors are the gold standard. We have been in the remanufacturing business since 1973, and have four businesses in our facility focused on supporting the aftermarket business and service.

As the original manufacturer, our compressors are remanufactured to the same tolerances and standards as if they were coming off the assembly line brand new. No other remanufactured compressor comes close to the quality and reliability of these Trane units. We are the only company that has the original unit specifications and in-depth manufacturing knowledge.

We also stand behind our products with industry-leading support and warranty coverage.

Unmatched Knowledge & Support

From the engineer who designed the specifications for your compressor - to the professional working on the manufacturing line - to the Trane Supply associate assisting you at the counter, we offer you the complete support you need, from start to finish.

OEM Remanufactured vs. others

When compressors are replaced, they can either be remanufactured or rebuilt. **Trane only offers remanufactured compressors, a more comprehensive and thorough process.**

During remanufacturing, all components are tested to meet or exceed specifications before reassembly and final testing. This ensures that the new compressor is in the best possible condition when it is completed, which can extend the life of the equipment.

Other remanufacturing/rebuilding processes, on the other hand, only replace the defective components. These processes may neglect to identify worn components which have not yet failed.

Warranty

This compressor comes with a standard two-year warranty and a first year system hazard warranty, excluding labor. The system hazard warranty provides a replacement compressor for the first operational failure during the first year. For the balance of the warranty, the compressor is covered by a replacement parts warranty, which provides parts or a replacement compressor for a failure due to a defect in material or manufacture.

When you need to replace your compressor, rely on Trane OEM remanufactured compressors.
