

Trane Tracer Ensemble Building Management System

The new Trane® Tracer® Ensemble™ building management system provides an enterprise-wide view into multiple building control systems. An enhanced user interface makes advanced system control fast and easy. New capabilities offer business advantages for both building owners and their tenants.

Features

- Standard out-of-the-box equipment-centric pages place the right information at a building manager's fingertips.
- Built-in reporting tools allow building managers to measure and compare building performance to verify energy usage and savings.
- Global functionality can manage schedules, setpoints and alarms across the entire enterprise.
- Custom dashboards allow building managers to create a visual display of current system health and performance.
- Fully integrated tenant solution increases building efficiency and improves tenant comfort.

Benefits

- The uniform and consistent user interface allows for quicker response to comfort complaints, increasing productivity and reducing training time.
- Access to all building system data provides building managers the opportunity to measure and compare building operation across assets and time periods to monitor performance over time.
- Tenant services allows building managers to track and charge for after-hours use and empowers tenants to easily control their comfort needs — increasing both revenue and tenant retention.
